PROGRAMME SPECIFICATION
(Taught Postgraduate)

1 Awarding Institution  Newcastle University
2 Teaching Institution  Newcastle University
3 Final Award  MSc
4 Programme Title  International Business Management
5 UCAS/Programme Code  4047 F
6 Programme Accreditation  N/A
7 QAA Subject Benchmark(s)  Masters Awards in Business and Management
8 FHEQ Level  Level 7
9 Date written/revised  July 2021

10 Programme Aims

The overall aim of the programme is to provide a pre-experience Masters qualification in business management with a strong international dimension. The international dimension of the programme is provided by the focus and orientation of the core, compulsory and elective modules. The specific aims of the programme are fourfold and are explicitly in line with the QAA benchmark standards for Masters Degrees in Business and Management (June 2015).

1 To provide an opportunity for students to engage in the advanced study of organisations, their management and the cultural and international context(s) in which they operate.
2 To enable students to prepare for and/or develop a career in business and management.
3 To enable students to develop the ability to apply their knowledge and understanding of international business management to complex issues, both systematically and creatively, to improve business and management practice.
4 To promote the enhancement of lifelong learning skills and personal development so that students will be able to work with self-direction and originality and contribute to business and society.

Attributes of students successfully completing the programme include:

- Advanced knowledge and understanding of how to improve the quality of management, leadership and practice in organisations.
- Enhanced general intellectual development, including the improved capacity for enquiry, problem solving, critical thinking and analysis.
- The acquisition of relevant professional attributes (ethical practice, confidentiality, etc.)
- Enhanced employability

The programme clearly reflects the knowledge, understanding and skills specified in the QAA benchmark for Generalist Masters Degrees for students with little or no prior experience. The level of the programme has also been informed by the Framework for Higher Education Qualifications requirements for a level 7 award. In this way the programme explicitly meets the relevant external referents. The programme is also aimed to comply with prevailing University policies and QAA codes of practice.
11 Learning Outcomes

The programme outcomes have reference to the QAA benchmark statements for Masters Degrees in Business and Management. They provide students with opportunities to demonstrate disciplinary competency by developing their knowledge and understanding of the key principles and theories of business management and combine theory with the application of skills required to generate solutions and communicate the results to others in a clear, concise and professional manner.

The terms ‘business’ and ‘organisations’ are understood generically to cover a wide range of examples including public, private and not-for-profit entities, together with a comprehensive range of sizes and structures. ‘Development’ encompasses not only a range of business knowledge and skills, but also the enhancement of a range of general transferable intellectual and study skills. These include: the self-awareness and personal development appropriate to graduate/management careers in business; the development not only of positive but also critical attitudes towards leadership, change, enterprise, and the dynamism of the business and management environment; and the ability to convert theory into practice from a critical and informed perspective.

Knowledge and Understanding

On completing the programme students will be able to:

A1 Critically evaluate a wide range of theoretical and applied approaches to international business management in a global economy.

A2 Apply an advanced understanding of the significance of internal and external environments to the management of business organisations in a global context.

A3 Critically interpret the managerial responsibilities and challenges in international business management and apply solutions in practice.

Teaching and Learning Methods

The primary means of learning is through lectures and small group teaching, including staff and/or student led discussion, experiential activities, case study analyses and simulations. External speakers contribute to knowledge and understanding applied to professional practice. Working individually and in groups during these activities, students are encouraged to consider the context(s) within which international business management operates and the challenges of integrating and applying theory in practice as well as to evaluate their understanding of the relevant subject knowledge.

Students are expected and encouraged to enhance their learning by independent reading and enquiry, for which they are given guidance on relevant materials.

Assessment Strategy

Knowledge is assessed formatively through a range of activities planned across the programme and include discussions, case study analyses, group exercises and presentations, role play, reflection and self-tests.

Summative assessments employ a wide range of activities in the form of individual and group assignments and group presentations, as well as unseen exams. Additionally, a research-based or a practice-based dissertation provides a final summative assessment of learning from the programme.
### Intellectual Skills

On completing the programme students will be able to:

- **B1** Critically analyse, evaluate and synthesise the challenges facing managers in international business organisations to apply solutions for successful business performance in a global environment.

- **B2** Work collaboratively in inter-cultural teams, make evidence-based decisions drawing on a range of sources, communicate effectively, manage projects, and solve problems in creative and innovative ways.

- **B3** Engage in reflective practice as an independent learner and resilient, ethical international business management professional.

### Practical Skills

On completing the programme students will be able to:

- **C1** Critically evaluate a wide range of data, information and evidence in preparation for working in a digitally enhanced environment.

- **C2** Define problems, propose solutions and contribute to decision making.

- **C3** Conduct research into business and management issues.

### Transferable/Key Skills

On completing the programme students will be able to:

- **D1** Use appropriate verbal or written communication to convey information tailored in content, style and presentation to the needs of their intended audience.

- **D2** Work effectively within a team and use individuals’ contributions in group processes to effectively function in formal leadership roles.

- **D3** Work independently, showing creativity, initiative and self-awareness.

### Teaching and Learning Methods – Intellectual, Practical and Transferable Skills

Student learning is developed through a variety of activities including completing group exercises, case studies, simulations, presentations, and undertaking research tasks.

Practical employability skills are developed through a wide range of student-centred activities that form the focus of ‘theory into practice’ elements of the programme. In particular, students have the opportunity to develop these skills through participating in student led discussion, experiential activities, presentations, case analyses and an integrative international business management simulation. These skills are further developed during the design and completion of either a research-based or a practice-based dissertation.

The teaching and learning methods employed recognise the range of international experience and cultural understanding that participants bring to the programme. Student learning is enhanced and these experiences are shared through extensive work involving diverse teams throughout the programme. Working in diverse groups also encourages participants to develop a self-managed approach to learning and the ability to work both in a variety of roles within groups and independently, as appropriate.

Students develop key skills in undertaking reflective practice in sessions throughout the induction period and within modules across the programme, including the use of feedback to develop learning. Reflective practice is formally integrated within an International Management
Finally, students are encouraged to participate in rich learning opportunities provided through a broader employability programme across the Business School including an option for international study abroad.

### Assessment Strategy – Intellectual, Practical and Transferable Skills

Formative assessment of these skills is by means of tutor and peer group feedback. Students also carry out a significant level of self-assessment which is encouraged, for example, during tutorials, seminars, and simulations.

Summative assessments employ a wide range of activities in the form of individual and group assignments, as well as unseen exams. Summative assessment is also formally undertaken through activities such as reflective writing assignments, peer evaluations and team presentations. Additionally, a research-based or a practice-based dissertation provides a final summative assessment of learning from the programme and of the ability to engage in reflective learning.

### 12 Programme Curriculum, Structure and Features

#### Basic structure of the programme

**Programme Features**

This is a modular programme of 180 credits which is studied over one year on a full-time basis. Recognising this is a conversion course designed primarily for students who generally have little or no prior experience in business or management, and often no prior experience of studying in the UK, the programme is structured to provide a coherent student learning journey that includes a transition to post graduate study in the induction process and early in the first semester.

The core knowledge and understanding associated with the QAA benchmarks are developed in subject specific modules in semesters 1 and 2, supported by electives in semester 2 and culminating in a research-based or a practice-based dissertation. To support this journey, the International Management Practitioner module provides a two-semester integrated skills and professional development spine leading to a major international business management simulation.

**There are three distinct phases of the programme.**

**Phase 1 – taught modules**

This is the compulsory and elective element of the programme representing 110 credits of study and provides participants with a broad understanding of the main areas of international business management and comprises ‘subject area’ modules as well as ‘skills’ modules. Students are required to take further optional modules to a value of 20 credits from an elective list approved annually by the Degree Programme Director. The electives offered each year are dependent on the availability of staff and are designed to enable students to develop areas of specialist knowledge and abilities.

**Phase 2 – integrative skills module**

At the start of semester three, students participate in an intensive bloc-delivered 10-credit module designed to integrate theory and practice from across the programme. Students compete in teams to operate a virtual company through a computer-based simulation. The emphasis is upon practical development of business analysis and strategic decision-making skills, combined with an opportunity for students to practise and hone their transferable team-working skills and reflective practice of use in the workplace and in further life.

**Phase 3 – culminating experience**

Students design, plan and execute a 50 credit culminating experience of either a research-
based or a practice-based dissertation. The dissertation is designed to enable students to demonstrate their knowledge, understanding and skills gained from the programme within the context of a detailed study of an international business management issue.

The mix of subject area and skills modules enables students not only to develop a well-rounded theoretical understanding of international business management but also to develop practical skills and experiential learning applying and integrating this knowledge in a business-relevant context. The culminating experience provides capstone activities that allow students to round off their degree by focusing either on developing their subject-area knowledge (research-based dissertation) or on developing their skills in applying knowledge in business contexts and to business decision making (practice-based dissertation).

During the summer students may also opt to undertake an intensive international experience at an approved summer school (as available) that provides an additional capstone experience to immerse themselves in another country’s academic environment, develop new contacts and gain additional skills for their future careers.

**Key features of the programme (including what makes the programme distinctive)**

Key features of the IBM programme are:

- the explicit provision of activities that develop transferrable management skills emphasising the importance of employability, including extensive team working and supported through the International Management Practitioner module;
- its focus on ‘theory into practice’ in an international context;
- its focus on providing students with opportunities to develop and practice intercultural communication and learning, harnessing the international experience of both the student cohort and staff;
- the use of an international business management simulation to integrate and consolidate learning from across the taught-element;
- the option to undertake a practice-based dissertation focussed on a ‘live’ business issue as an alternative to a research-based dissertation;
- the opportunity to participate in an intensive course at a summer school with one of our global partner universities that will complement learning at NUBS while developing international awareness and networks.
