# Programme Specification

## Awarding Institution
Newcastle University

## Teaching Institution
Newcastle University

## Final Award
BSc

## Programme Title
- Theoretical Physics
- Theoretical Physics with Placement Year

## UCAS/Programme Code
- F345
- 1179U

## Programme Accreditation
The programme is accredited by the Institute of Physics (IOP).

## QAA Subject Benchmark(s)
Physics

## FHEQ Level
6

## Last updated
July 2021

## Programme Aims

The programme aims to:

1. To provide opportunities for students to undertake a broad-based education in Physics, with specialist knowledge of the theoretical underpinnings and to acquire the appropriate knowledge and understanding of key physical principles and their application to real world challenges.
2. To produce graduates who will be equipped to enter employment in relevant industry, the professions or public service, or to follow a postgraduate route into research, industry or academia, or to apply the skills learnt in a range of areas outside of physics or academia.
3. To allow for the development of increased knowledge in areas of specialisation and develop techniques to support self-learning of concepts.
4. To give experience of group activities.
5. To produce graduates who will meet the accreditation requirements of the Institute of Physics.
6. To provide a qualification which meets the designated learning outcomes at Bachelors level of the National Qualifications framework.

For students on the Placement Year programme:

7. Provide students with the experience of seeking and securing a position with an employer.
8. Facilitate independent self-management and proactive interaction in a non-university setting.
9. Provide a period of practical work experience that will benefit current academic study and longer term career plans.
10. Enable students to ethically apply their knowledge and skills in the work place, reflect upon their development and effectively evidence and articulate their learning in relevant future settings.
# Learning Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, qualities, skills and other attributes in the following areas. The programme outcomes have references to the 2008 QAA benchmark statements for Physics (P).

## Knowledge and Understanding

On completing the programme a successful student will have gained and be able to demonstrate:

- **A1.** Knowledge and understanding of the mathematics required to explain the advanced concepts in physics (P)
- **A2.** Knowledge and understanding of the fundamental physical laws and principles and competence in the application of these principles to diverse areas of physics (P).
- **A3.** An ability to solve problems in physics using appropriate mathematical tools (P).
- **A4.** The ability to execute and analyse critically the results of an experiment or investigation and draw valid conclusions (P).
- **A5.** Application of IT principles in the study of physics (P).
- **A6.** Mathematical methods and techniques appropriate to more specialised areas of theoretical physics.

For students on the Placement Year programme:

- **A7.** Apply personal and professional development strategies to prioritise, plan, and manage their own skills development and learning.
- **A8.** Research, select and apply relevant knowledge aimed at enhancing their own skills and effectiveness in specific duties at their placement.
- **A9.** Demonstrate an understanding of a work environment, how it functions and their contribution to it.
- **A10.** Relate their work based learning to other areas of personal development, including academic performance.

## Teaching and Learning Methods

Lectures are the principal vehicle for presenting the essential fundamental concepts and material which define the module, and provide the key element towards achieving the learning outcomes. Problem classes and small group tutorials are used to support lectures and enhance students’ understanding by providing an opportunity to clarify issues arising from lectures and work through additional examples. Throughout the programme the student is encouraged to undertake independent reading both to supplement and consolidate the presented material and to broaden their individual knowledge and understanding of Physics.

## Assessment Strategy

The knowledge based for the lecture based material is tested through the use of formal examinations. Problem solving is assessed in Stage 1 laboratory based module and the latter year project work, as well as in the tutorial sheets provided for each of the taught modules. Experimental investigations and the use of IT facilities will be assessed through the project work, Stage 1 practical sessions and the related reports.

## Intellectual Skills

On completing the programme students should be able to demonstrate:

- **B1.** An ability in numerical manipulation to solve problems and analyse data (P)
- **B2.** An ability to use mathematical techniques and analysis to model physical behaviour (P)
- **B3.** An ability to plan, conduct and report a programme of investigate work (P)
- **B4.** Organisation within a group to achieve a set of defined goals (P)
Teaching and Learning Methods
Small group tutorial sessions and tutorials in lectures are used to give students the opportunity to ask individual questions about exercises and to clarify issues arising from lectures. Analysis and problem solving skills are developed through these sessions, assignments set as part of modules in Stage 1 and 2 and during the project based activity in the final year. Theoretical research and design skills are further developed during the latter Stage project based modules.

Assessment Strategy
Analysis and problem solving skills are assessed through the use of formal university examination and assignments set during modules. Experimental, creative and organisation skills are assessed during Stage 1 laboratory, the computational modelling module and project based activity, through the assessment of reports and laboratory notebooks.

Practical Skills
On completing the programme students should be able to:
C1. Demonstrate successful and safe use of basic laboratory apparatus and techniques (P)
C2. Take effective measurements and record them appropriately
C3. Critically analyse experimental data, in terms of error analysis, to determine their strength and validity.
C4. Give technical presentations on scientific data generated by the student.
C5. Use computational modelling and data analysis packages.

Teaching and Learning Methods
Skills are introduced in dedicated laboratory sessions (for example the propagation of uncertainties supported with analysis packages such as MatLab during the Stage 1 laboratory modules).

Assessment Strategy
Assessment of skills is through observed laboratory and project work, laboratory and project reports and assessed presentations and demonstrations during the project work. The use of computational modelling and data analysis is introduced in laboratory sessions in Stage 1; assessed through reports.

Transferable/Key Skills
On completing the programme students should be able to:
D1. Demonstrate the ability to present and interpret information graphically
D2. Demonstrate an ability to effectively communicate scientific information. In particular the student will be required to produce clear and accurate scientific reports.
D3. Demonstrate an ability manage their own leaning and to make use of appropriate texts, research-based materials or other learning resources.

For students on the placement year programme:
D4. Reflect on and manage own learning and development within the workplace.
D5. Use existing and new knowledge to enhance personal performance in a workplace environment, evaluate the impact and communicate this process.
D6. Use graduate skills in a professional manner in a workplace environment, evaluate the impact and communicate the personal development that has taken place.

Teaching and Learning Methods
Transferable skills are developed throughout the programme. The presentation of information is developed during laboratory sessions, using a variety of methods, from report writing, laboratory notebooks and oral presentations. The use of external information, in terms of scientific journals will be developed during the project work in the latter Stages.
### Assessment Strategy

The skills will primarily be assessed through the use of reports on experimental investigations at Stage 1 and the subsequent project work.

<th>Programme Curriculum, Structure and Features</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Basic structure of the programme</strong></td>
<td>The normal Undergraduate year is arranged in three terms and is divided into two semesters. Semester 1 is twelve weeks, preceded by an induction week and followed by a period of examination for those topics completed in semester 1. Semester 2 is also twelve weeks long and is followed by a second examination period. The programme normally lasts three years, although it is possible to take a gap year. Candidates study 120 credits in each Stage (or year), resulting in BSc candidates completing 360 credits by the end of their course. Candidates must successfully complete all parts of a Stage before progressing to the next. Programmes are pursued through full-time study; the only part-time study is limited provision for the repetition of failed modules. Students on the Placement Year programme will be on placement year between Stages 2 and 3 of their programme. There is a foundation year for candidates not adequately qualified to embark on Stage 1 of the degree programme.</td>

| **Key features of the programme (including what makes the programme distinctive)** | A distinctive feature of the programme curriculum is the flexible structure, operating within the University’s modular system. Students can choose modules aligned to their interests at Stage 3, with the programme content related to the research interests of the staff. The accreditation requirements of the programme require coverage of a specified curriculum, which ensures that there is a not a significant difference between degrees at other institutions. |
