

PROGRAMME SPECIFICATION

1	Awarding Institution	Newcastle University
2	Teaching Institution	Newcastle University
3	Final Award	BSc
4	Programme Title	Physics Physics with Placement Year Physics with International Study Year
5	UCAS/Programme Code	F300 1177U 1804U
6	Programme Accreditation	The programme is accredited by the Institute of Physics (IOP)
7	QAA Subject Benchmark(s)	Physics
8	FHEQ Level	6
9	Last updated	May 2025

10 Programme Aims

The programme aims:

1. To provide opportunities for students to undertake a broad-based education in Physics and to acquire the appropriate knowledge and understanding of key physical principles and their application to real world challenges.
2. To produce graduates who will be equipped to enter employment in relevant industries, professions or public service, or to follow a postgraduate route into research, industry or academia, or to apply the skills learnt in a range of areas outside of physics or academia.
3. To allow for the development of increased knowledge in areas of specialisation and develop techniques to support self-learning of concepts.
4. To give experience of group activities.
5. To produce graduates who will meet the accreditation requirements of the Institute of Physics.
6. To provide a qualification which meets the designated learning outcomes at Bachelor's level of the National Qualifications framework.

For students on the Placement Year Programme:

7. Provide students with the experience of seeking and securing a position with an employer.
8. Facilitate independent self-management and proactive interaction in a non-university setting.
9. Provide a period of practical work experience that will benefit current academic study and longer-term career plans.
10. Enable students to ethically apply their knowledge and skills in the workplace, reflect upon their development and effectively and articulate their learning in relevant future settings.

For students on the International Study Year Programme:

11. Offer students the opportunity to develop graduate attributes which increase employability, particularly communication and (where applicable) language skills, intercultural competencies, adaptability, resilience and global awareness.
12. Gain insight into international Higher Education and experience differences in

- academic approach and learning environment.
13. Provide the opportunity to experience new areas of study outside of their usual programme of study at Newcastle University.

11 Learning Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, qualities, skills and other attributes in the following areas. The programme outcomes have reference to the 2008 QAA benchmark statements in Physics (P).

Knowledge and Understanding

On completing the programme, a successful student will have gained and be able to demonstrate:

- A1. Knowledge and understanding of the mathematics required to explain the advanced concepts in Physics (P).
- A2. Knowledge and understanding of the fundamental physical laws and principles and competence in the application of these principles to diverse areas of Physics (P).
- A3. An ability to solve problems in Physics using appropriate mathematical tools (P).
- A4. The ability to execute and analyse critically the results of an experiment or investigation and draw valid conclusions (P).
- A5. Application of IT principles in the study of Physics (P).

For students on the Placement Year programme:

- A6. Apply personal and professional development strategies to prioritise, plan and manage their own skills development and learning.
- A7. Research, select and apply relevant knowledge aimed at enhancing their own skills and effectiveness in specific duties at their placement.
- A8. Demonstrate an understanding of a work environment, how it functions and their contribution to it.
- A9. Relate their work-based learning to other areas of personal development, including academic performance.

For students on the International Study Year programme:

- A10. Demonstrate the ability to adapt to different learning environments.

Teaching and Learning Methods

Lectures are the principal vehicle for presenting the essential fundamental concepts and material which define the module and provide the key element towards achieving the learning outcomes. Problem classes and small group tutorials are used to support lectures and enhance student's understanding by providing an opportunity to clarify issues arising from lectures and work through additional examples.

Throughout the programme, the student is encouraged to undertake independent reading both to supplement and consolidate the presented material and to broaden their individual knowledge and understanding of Physics.

Assessment Strategy

The knowledge base for the lecture-based material is tested using formal examinations. Problem solving is assessed in laboratory-based modules, including individual and group project work as well as in the tutorial sheets provided for each of the taught modules. Experimental investigations and the use of IT facilities will be assessed through practical sessions and the related reports.

Intellectual Skills

On completing the programme students should be able to demonstrate:

- B1. An ability in numerical manipulation to solve problems and analyse data (P).

- B2. An ability to use mathematical techniques and analysis to model physical behaviour (P).
 B3. An ability to plan, conduct and report a programme of investigative work.
 B4. Organisation within a group to achieve a set of defined goals.

Teaching and Learning Methods

Small group tutorial sessions and tutorial in lectures are used to give students the opportunity to ask individual questions about exercises and to clarify issues arising from lectures.

Analysis and problem-solving skills are developed through these sessions, assignments set as part of modules in all stages, and during the project-based activity in the final year.

Experimental, research and design skills are further developed during the latter stage laboratory and project-based modules.

Assessment Strategy

Analysis and problem-solving skills are assessed using formal university examination and assignments set during modules.

Experimental, creative and organisation skills are assessed during laboratory and project-based activity, through the assessment of reports and laboratory notebooks.

Practical Skills

On completing the programme students should be able to:

- C1. Demonstrate successful and safe use of laboratory apparatus and techniques (P).
- C2. Take effective measurements and record them appropriately.
- C3. Critically analyse experimental data, in terms of error analysis, to determine their strength and validity.
- C4. Give technical presentations on scientific data generated by the student.
- C5. Use computation modelling and data analysis packages.

Teaching and Learning Methods

Skills are introduced in dedicated laboratory sessions (for example the use of χ^2 analysis of data in a Stage 1 laboratory session) and then refined during the subsequent sessions.

Assessment Strategy

Assessment of skills is through observed laboratory and project work, laboratory and project reports and assessed presentations and demonstrations during the project work.

The use of computational modelling and data analysis is introduced in laboratory sessions in Stages 1 and 2; assessed through reports.

Transferable/Key Skills

On completing the programme students should be able to:

- D1. Demonstrate the ability to present and interpret information graphically.
- D2. Demonstrate an ability to effectively communicate scientific information, in particular the student will be required to produce clear and accurate scientific reports.
- D3. Demonstrate an ability to manage their own learning and to make use of appropriate texts, research-based materials or other learning resources.
- D4. Demonstrate problem solving skills.
- D5. Demonstrate exceptional levels of numeracy.

For students on the Placement Year programme:

- D6. Reflect on and manage own learning and development within the workplace.
- D7. Use existing and new knowledge to enhance personal performance in a workplace environment, evaluate the impact and communicate this process.
- D8. Use graduate skills in a professional manner in a workplace environment, evaluate the impact and communicate the personal development that has taken place.

For students on the International Study Year Programme:

D9. Adapt and operate in a different cultural environment.

Teaching and Learning Methods

Transferable skills are developed throughout the programme. The presentation of information is developed during laboratory sessions, using a variety of methods, from report writing, laboratory notebooks, communication with non-scientists and oral presentations.

The use of external information, in terms and scientific journals, will be developed during the project work in the latter stages.

Assessment Strategy

The skills will primarily be assessed using reports on experimental investigations including project work.

12 Programme Curriculum, Structure and Features

Basic structure of the programme

The normal Undergraduate year is arranged in three terms and is divided into two Semesters. Semester 1 is twelve weeks, preceded by an induction week and followed by a period of examination for those topics completed in Semester 1. Semester 2 is also twelve weeks long and is followed by a second examination period.

The programme normally lasts three years, although it is possible to take a gap year. Candidates study 120 credits in each stage (or year), resulting in BSc candidates completing 360 credits by the end of their course. Candidates must successfully complete all parts of a stage before progressing to the next. Programmes are pursued through full-time study; the only part-time study is limited provision for the repetition of failed modules.

Students on the Placement Year / International Study Year programmes will be on placement year between stage 2 and 3 of their programmes.

There is a Foundation Year for candidates not adequately qualified to embark on stage 1 of Degree Programmes.

Key features of the programme (including what makes the programme distinctive)

A distinctive feature of the programme curriculum is the flexible structure, operating within the University's modular system, in which students can choose pathways which provide either.

- a) A broad Physics based education throughout their programme of study, or
- b) A general Physics background followed by more specialised study of those areas which are related to the research interests of the staff.

The accreditation requirements of the programme require the inclusion of key concepts, which ensures that there is not a significant difference between degrees at other institutions.
